

ERGONOMIC CHOCK HD

AGMOV HD Ergonomic chock was developed to adapt to cargo vehicles in an ergonomic and safe way. With it, the operator can position and adjust the chocks while remaining standing, eliminating risks associated with improper posture and injuries due to being run over. The chock also has a locking box compatible with the LOTO system, ensuring that the vehicle remains wedged and locked, preventing accidental or intentional movements. This is the only product on the market that offers all the documentation required by current regulations, such as the ART (Technical Responsibility Note), and complies with legislation such as the Brazilian Traffic Code (CTB).

ART confirms the participation of a qualified and qualified professional in the preparation of the equipment project, as required by current laws and regulations. This guarantees product quality and helps prevent workplace accidents.
